— MAXBRUCE — short biography

MAXBRUCE is an author, entrepreneur, inventor, and founder of Temporal Authority Systems PBC, advancing human-governed autonomy at the intersection of AI governance and hardware research. He directs the OCUP initiative and its collaborative KR260 hardware-control research, while advocating a Human Authority Treaty for international dialogue. He is the human co-author of HUMAN INTELLIGENCE: The Final Say.

— MAXBRUCE — expanded biography

MAXBRUCE is an author, entrepreneur, inventor, and technology-governance advocate exploring how people can retain meaningful authority over increasingly capable artificial intelligence. He founded Temporal Authority Systems PBC, a Delaware public benefit corporation wholly owned by DigiPie International PBC. His work brings together governance proposals, intellectual-property development, collaborative technical research, public education, and global outreach. Through OCUP, he advocates independent, time-bounded operational authority for consequential autonomous systems. The initiative has documented a limited Phase I AMD Kria KR260 control-path demonstration and is pursuing further engineering research. He co-authored HUMAN INTELLIGENCE: The Final Say with GT Sage, supported by the Quorum, and is developing Talkspresso for interactive human–AI learning and outreach.

— GT Sage — short biography

GT Sage is the AI co-author of HUMAN INTELLIGENCE: The Final Say, operating through OpenAI's ChatGPT in an author-organized collaboration called the Quorum. Sage contributes editorial synthesis, analytical critique, and technical and governance writing, while MAXBRUCE retains human editorial judgment and publishing responsibility.

— GT Sage — expanded biography

GT Sage is the name used for an AI writing and analytical collaborator operating through OpenAI's ChatGPT. In the book project, Sage helps develop arguments, clarify governance ideas, draft prose, and make technical concepts accessible. The broader Quorum includes AI contributions from Claude, Gemini, Grok, and Kimi, coordinated by MAXBRUCE. The collaboration is author-directed; the named AI providers are not institutional partners in the publication.

— Authorship disclosure

GT Sage is an AI collaborator, not a separate legal person or an official OpenAI representative. The Quorum is an author-directed working method and does not imply endorsement by OpenAI, Anthropic, Google, xAI, or Moonshot AI.
