PRINT EDITIONS	Special Color, Regular Color, and Black & White

Read the book

Free English and Simplified Chinese PDFs are available now at thefinalsay.org. The website also provides links to print editions. Specific retail identifiers and prices are available from the relevant product listings.

Inside

A manifesto for human authority; the Human Authority Treaty (HAT) discussion proposal; OCUP™ temporal-authority architecture; the qualified KR260 Phase I evidence; dialogues with multiple AI systems; policy and engineering discussion; and invitations for public participation.

Connected initiatives

HAT	a proposed international governance framework, not an adopted treaty.
OCUP	proposed hardware authority control, not a deployed universal chip.
TALKSPRESSO	an independent conversation platform where MAXBRUCE hosts human–AI conversations; school and community sessions are planned, with dates to be announced.

Phase I evidence

A host-driven MMIO sequence on a physical AMD Kria KR260 was granted and closed without reopening during the recorded window, including deliberate reassertion. STATUS 0x1060 held for five seconds; reopen latch [4] remained clear. No physical resource gating or resistance to host/OS/DMA/bitstream bypass was established.
